**COMPTON**  
NEWARK, N.J.

Established 1898

The home of the **COMPTON** Shear is one of the most completely equipped plants and includes every labor saving device of merit.  
Thousands of shears, scissors and tinners' snips are produced annually, within our own organization, from a bar of steel to the finished product.

**COMPTON SHEARS ARE BUILT TO CUT AND THEY DO**

## THE VITAL FEATURES OF EVERY **COMPTON RELIANCE** CUTTING TOOL

The fine finish of a **COMPTON** Shear reflects the surpassing excellence of the materials of which it is made.

The precise hardened and tempered blades determine the quality and cutting power.

The tested steel, the intricate manufacturing operations, plus the human element are the vital points in every **COMPTON** cutting tool.

Whether the larger tailors' shears, household shears, tinnerns' snips or the delicate embroidery or manicure scissors are required, the stay sharp edges that last a lifetime are always assured, when **COMPTON** products are used.

Make certain that you supply your customers with the genuine **COMPTON**, the precision kind, as **COMPTON** cutlery is tested, inspected and approved, step by step, by master workmen before these masterpieces of the cutler's art are branded with the imprint of the **COMPTON QUALITY** approval.

QUALITY  
RELIABILITY  
SERVICE

All **COMPTON** Reliance Shears, Scissors and Tinnners' Snips are sold with the strongest pledge of service as every pair is fully warranted, and the guarantee tags attached to all **COMPTON** cutlery protects dealer and consumer.

The weights and measurements throughout this catalogue may vary, as many operations are necessarily hand work.

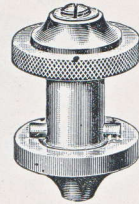

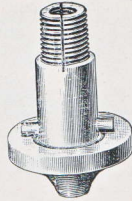

## EXPANSION TAILORS' SHEAR BOLT

Patented

Split Bolt.

Expansion Taper Screw  
and Adjusting Nut.

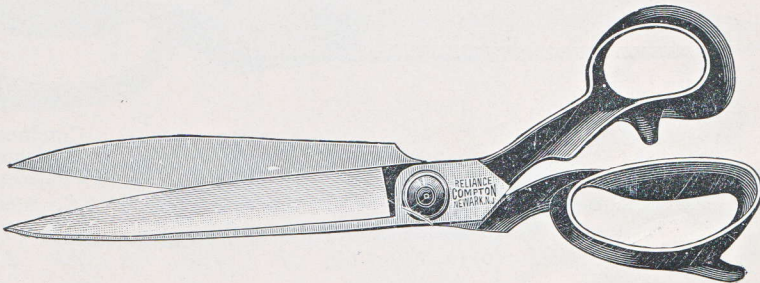

Complete Bolt.

With the aid of a small screw driver, the shear can be taken apart, cleaned of all grit, lint and dirt accumulating under the bolt, readjusted immediately by a twist of the nut and the tightening of the Expansion Set Screw.

This bolt avoids complicated devices, such as tension springs, washer appliances and cumbersome attachments. It consists of three parts that can only be correctly replaced. The simplicity of this improvement has brought forth the unqualified approval of many operators in the textile trades. The **COMPTON Patented Expansion Shear Bolt** is furnished with all **COMPTON Tailors' Shears** except Nos. 1 R. and 2 R. without extra charge, if ordered.

## REVOLVING BUTTONHOLE CUTTER

Bauer's Patent. Number 100

Drop-Forged Steel, Rigid and Strong  
Blue Finish Handles

Number .....	100
Full Length, Inches.....	9 $\frac{5}{8}$
Average Weight per Dozen, Packed, Lbs.....	14

We supply extra Knife Blades, Cylinders, Thumb Screws,  
Tubes, Gauges and Springs.

## FACTS—HISTORICAL AND INTERESTING

In 1899 the American shear and scissor industry was confronted with the problem of making laid shears with shear malleable iron that was not serviceable for welding purposes.

This difficulty was caused by the changed method of Pig Iron production, from the antiquated, slow, expensive charcoal process to the newer coke oven method which, tho quicker and more economical for general use, would not produce good shear malleable.

**THE W. H. COMPTON SHEAR COMPANY** then conceived and carried out their original idea of welding to crucible tool steel **SOFT DROP FORGED STEEL FRAMES** for Laid Shear manufacturing.

When this Company, the first successful users of this plan, introduced this product the balance of the industry to a man, declared the **COMPTON NEW PROCESS** a failure, **BUT WITHIN FIVE YEARS** every American Welded Shear manufacturer adopted the original **COMPTON** ideas and claimed them as their own.

In the early part of 1900 **THE W. H. COMPTON SHEAR COMPANY** made another marked advance in American Shear and Scissor construction by introducing the first **COMPLETE AMERICAN** made drop forged all steel shears and scissors.

At first the productive costs of this new commodity were too high for general distribution, but the success and demand created by the Auto industry for more perfect and simplified methods of Drop Forged parts reduced the costs considerably.

Since 1921, we have added to our 21 complete lines of high grade all steel drop forged scissors and 28 different sizes and patterns of trimmers, paper shears and tinners' snips.

**BECAUSE OUR MANUFACTURING METHODS ARE YEARS AHEAD OF OTHER AMERICAN SHEAR AND SCISSOR MAKERS, AND WE INTEND TO REMAIN IN FRONT,** our drop forged all steel product is again the target of an insidious propaganda, yet one by one, our competitors are attempting to follow our lead.

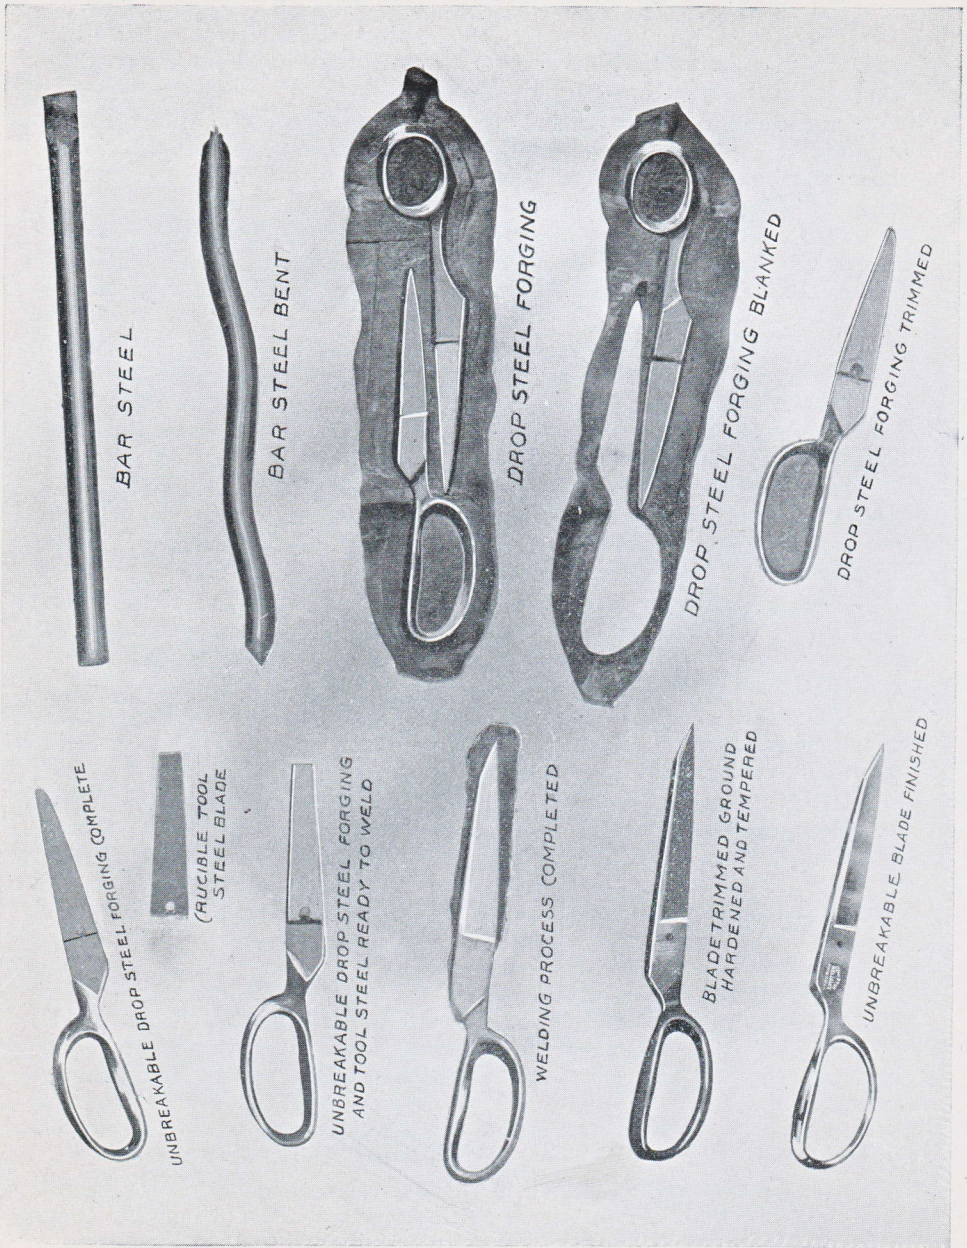

We know by actual severe tests for over a period of twenty years, that a shear made by the **COMPTON PROCESS** drop forged of **ELECTRIC FURNACE HIGH CARBON CRUCIBLE BAR STEEL**, will hold its sharp edges longer; last a lifetime and more, do better work with less effort and return more actual service and greater value than any **WELDED, LAID** or so-called **IN-LAID** product, because of the methods the laid shear production compels the maker to employ.

We anticipate the offering of a complete and full line of Straight and Bent Trimmers, Household Shears, Dressmakers' Shears, Paper, Bankers' Shears and Tinners' Snips from 6 inches to 16 inches, within a short period.

We now manufacture all steel straight and bent trimmers 5½ to 8 inches, paper shears 8 to 10 inches all sizes, nine patterns of barbers' shears, several sizes of tinners' snips, also completed lines in many varieties of Ladies', Pocket, Embroidery, Buttonhole, Surgical, Bandage, Mill, School, Manual Training, Electrician, Tailors' points, Cuticle and Nail scissors.

# COMPTON *Perfection* SHEARS

Patented

**COMPTON Perfection Shears (Patented)** are a radical improvement constructed to give the utmost in service.

A **COMPTON Perfection Shear (Patented)** will do more and better work with less effort.

All Shears, no matter how well made or how slightly worn, require a cramped position of the hand to force both blades together to make them cut properly.

A **COMPTON Perfection Automatic Shear (Patented)** avoids this inconvenience. It is positive in its action, takes up the wear under the screw head, automatically places both cutting edges together in perfect alignment, improves with use, and doubles the stay-sharp capacity of the Shears. It is always in cutting condition.

The automatic upward tension is produced by a hollow thimble containing a music wire coil spring and a self-lubricating steel stud placed between the blades, out of sight.

**COMPTON QUALITY**, combined with the patented **Perfection** attachment, makes the **PERFECT SHEAR**.

**FULLY WARRANTED TO REMAIN SHARP LONGER, CUT EASIER AND OUTWEAR ANY OTHER MAKE.**

## Compton *Perfection* Shears

Patented

(Patented) are made in all sizes. Japanned Handle, Nickel-Plated Blades, Full Nickel Plated, also Chrome Over Nickel, the Rust, Stain and Tarnish Resisting finish.

Average Weight per Dozen, Packed, Lbs.....	10

## STAGES OF SOLID STEEL SCISSOR FORGING AND FINISHING

As the **American** pioneers in successful forged solid steel scissor construction, we were enabled to offer a few sizes in 1900.

The immediate, unqualified success of the **Compton Forged Solid Steel Scissors** and the immense demand created, induced us to increase and enlarge the assortment.

### Variety of Patterns, Quality, Style and Finish Are Second to None

The **Compton Forged Solid Steel** Straight Trimmers, Surgical, Bandage, Pocket, Embroidery, Ladies', Buttonhole, Electrician and Tailors' Point Scissors are manufactured of tested Electric Furnace High Carbon Crucible Bar Steel, perfectly tempered, correctly regulated and beautiful in design.

### Absolutely American Made

We warrant and guarantee the **Compton Forged Solid Steel Trimmers and Scissors**, as the most marketable ever offered and refer with pride to this line.

## EMBROIDERY SCISSORS

Forged Solid Steel. Number 25  
Full Nickel Plated. Handsomely Finished

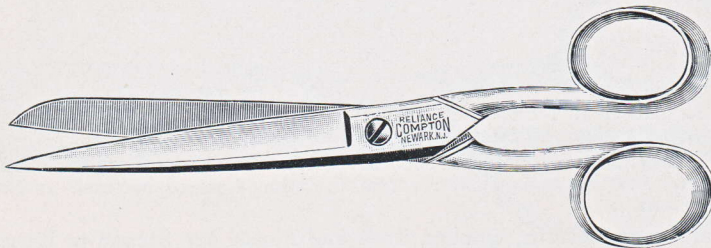

No. 25

Full Length, Inches.....	3	3½	4
Length of Cut, Inches.....	1	1¼	1½
Average Weight per Dozen, Packed, Lbs.....	½	¾	1

COMPTON Scissors are given the preference in many homes and mills because they cut the thinnest silk or the heaviest fabric clean and true from the heel to the needle points; they remain sharp for years.

## LADIES' SCISSORS

Forged Solid Steel. American Pattern. Number 62  
Full Nickel Plated. Handsomely Finished

No. 62

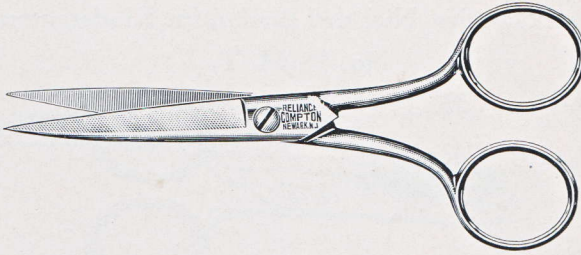

Full Length, Inches.....	4	4½	5	5½	6	6½	7

## COMPTON "RELIANCE" BARBERS' SHEARS

Reverse Edge Grinding. Forged Solid Steel

COMPTON "Reliance" Special Temper Endurance Barbers'

Shears. Number 717

Handles and Blades Full Polished

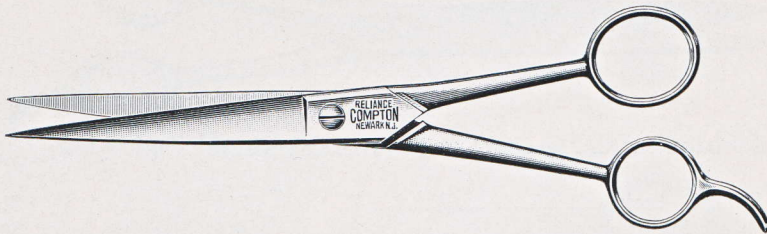

Half Oval Blades, very light weight, for the barber who knows how to handle the perfect hair-cutting shear.

### Construction and Quality of COMPTON Endurance Special Temper Barber Shears

We start, of course, with a special steel, every inch being inspected and tested by qualified experts.

From the moment this special steel goes to the Forge Shop until all operations are completed COMPTON Endurance Special Temper Barbers' Shears pass through as thorough processes as skill and experience can make them.

The methods of construction are so extravagantly good that these tools built for Endurance will outlast and stay sharp longer than any other make of shears.

No. 717—Full Polished

Full Length, Inches.....	7	7½
Length of Cut, Inches.....	2¾	3
Average Weight per Dozen, Packed, Lbs.....	1¾	2

Made with serrated edges if ordered. We find that the most successful barbers prefer one edge only to be serrated.

## COMPTON "RELIANCE" BARBERS' SHEARS

are forged of Electric Furnace High Carbon Crucible Bar Steel.  
The All Steel Shear.

### Important

We furnish at small additional cost, if ordered, Barbers' Shears with special finishes:

## COMPTON DROP FORGED STEEL "RELIANCE" TINNERS' SNIPS

Bar Tool Steel Welded on Steel Drop Forgings

As nothing is so severely tested as a Tinner's cutting tool, we use better stock, take more care in hardening, tempering, grinding and finishing, employing the very best mechanics, trained experts—every one a master of his craft.

The **Compton** Tinner's Snip Handles are properly proportioned and the bows shaped to fit the hand; the leverage obtained by being well balanced increases the cutting power and takes all strain from the wrist, allowing constant use without fatigue.

By reason of our factory tests—

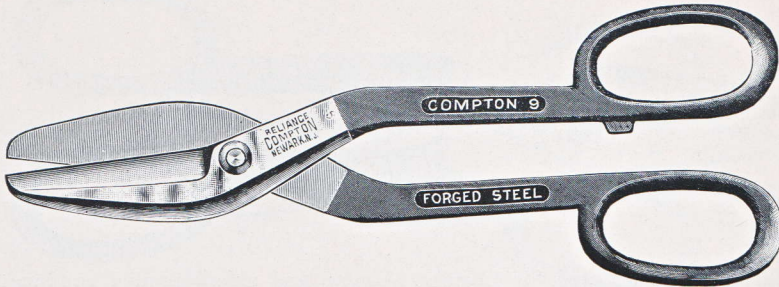

We know that the **Compton** "Reliance" Tinner's Snips are absolutely the very best, each pair warranted with an unlimited guarantee to remain sharp longer, cut easier and outwear any other make.

A **Compton** Snip must prove satisfactory in every particular or we will exchange the same.

Average Weight per Dozen, Packed, Lbs.....	14
Packed in individual boxes.	

## COMPTON "RELIANCE" GRASS SHEAR No. 507

Serrated Edge, Black Japanned Handles, Polished Blades. Music Wire Coil Spring.

No. 507

Full Length, Inches.....	12 $\frac{3}{8}$
Length of Cut, Inches.....	6
Average Weight per Dozen, Packed, Lbs.....	12

Packed in individual boxes.

Compton Grass Shears are held together by a strong screw, the steel blades hold their thoroughly hardened and tempered edges indefinitely, they can be repaired like new when necessary.

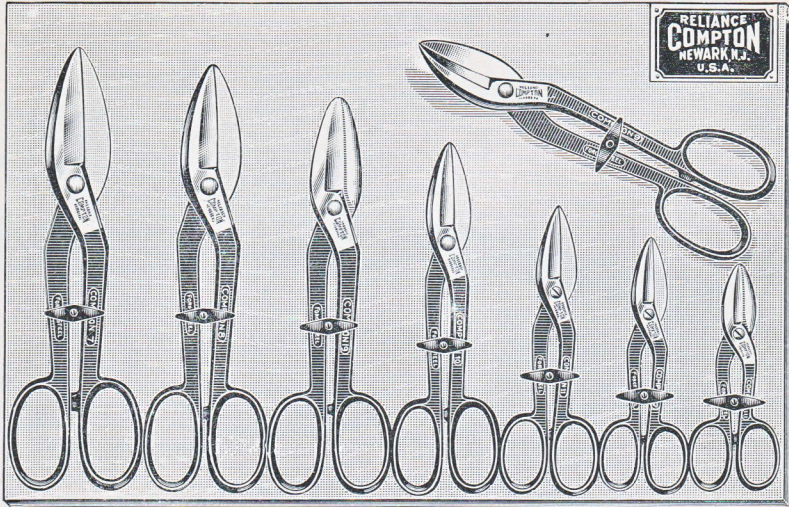

The handles have a higher offset than other makes of shears of this type, protecting the fingers from injury while in use.

Adjusted to cut easily, the serrated edge holding the grass, preventing slipping towards the point, while the keen, smooth edge does the cutting. Handles shaped to give rest and comfort to the operator.

## DISPLAY PANELS

are great merchandising assistants, silent salesmen that attract much attention and often remind a prospective customer of his wants and requirements. Can be used as an effective window display.
